PLANTING AND CULTURAL SUGGESTIONS

(File or Hang This Where it Will Make a Ready Reference)

CAMELLIAS

"Camellias are not difficult to grow. Many fine old specimen plants are to be found scattered throughout the Lower South, where they have been growing for years with but little care, and thriving on practically all types of lands characteristic of the region. However, they prefer and do best on a good, well-drained soil that has a slight acid reaction."

PLANTING: If your plant is balled and burlapped, you need not remove the burlap—it will quickly rot away. If in a can, you may grow it on for as long as a year—or longer for the 4-gal. cans—or else remove it from the can by cutting down the side with tin snips. If it is in a paper pot you may put it in the next larger size clay pot or plant it in the ground.

PLANTING DEPTH: Be careful not to plant deeper than the plant was growing in the nursery—let top of ball be level with, and in tight soils slightly above, ground level—never below.

DRAINAGE: Choose a well-drained location. This is very important.

SOIL PREPARATION: Improve your soil if necessary by mixing in peat moss, leaf mold and/or stable manure. Do not let stable manure touch the roots. If soil is heavy and stiff a small quantity of sand mixed in will be helpful.

SUN OR SHADE: Camellias will grow in sun or shade, but require less attention, when young, if planted in semi-shade, or where the sun hits them for only half a day (preferably the latter half).

MOISTURE: When Camellias are first planted, in addition to thoroughly wetting them down at the time of planting, the soil should be kept quite moist for three to four weeks, by frequent waterings. Water Camellias well, particularly the first two years. After the first three weeks, thorough watering (wetting soil 8 inches deep) once every week or ten days during the growing season is much to be preferred to a daily light sprinkling.

ACID SOIL: Camellias prefer a somewhat acid soil. Most soil in this region is adapted to growing Camellias, but if you are in doubt about your own soil, advice from a local garden or agricultural authority is advisable.

FERTILIZATION: Camellia fertilization is just as essential as moisture and weed control. If commercial fertilizers are used, most authorities advise two or three applications yearly, the first application in late winter (February) and the last in June. Any well balanced commercial fertilizer (such as 4-6-8) that does not have an alkaline reaction is satisfactory. Splendid growth may usually be obtained by home owners by three applications

of commercial fertilizer, applying one-fourth of a pound to ten square feet of ground (4' x 2½') or (3' x 3-1/3') at each application. However, it is recommended that you follow local garden club advice concerning your fertilization program on your soil types—formula to use, rate and time of application, etc. **Be especially careful not to over-fertilize.** Many have lost their plants by applying too much fertilizer. Well-rotted stable manure has often been used to good advantage. Where you mix your own fertilizer, Cotton Seed Meal is probably the best source of Nitrogen, since it can be bought everywhere, and it is slow acting. Some people have gotten very good results with a mixture of 1/3 Acid Phosphate, and 2/3 Cotton Seed Meal, by weight. If Potash is available it is suggested that 1/10 by weight of Potash be added. Work up the top soil one inch deep before applying the fertilizer. Then spread the fertilizer evenly over the surface of the ground, covering all the root area. Now work the fertilizer into the top one inch of soil.

SPRAYING: Camellias may be attacked by scale insects. Control is effected by spraying with a good oil emulsion during the early spring (April 1st), and if complete control is not obtained, by a second spraying later in the summer. Most nurseries use a white oil emulsion at the rate of one part oil to 50 parts water. Spraying with oil should never be done when there is danger of frost or when the temperature may go above 90°. Take care to spray the **underside** of the leaves thoroughly. If you have just a small amount of scale, wiping it off with soap and water is a simple and effective remedy. When red spider appears they may be kept down by spraying with a strong force of water daily. Dusting with sulphur when the foliage is wet with dew will control red spider. (Be careful not to spray with oil till all sulphur dust has washed off of the leaves. The oil spray will of course kill red spider too, and more effectively.)

AZALEAS

Azalea culture follows very closely that of Camellias, with perhaps a little more emphasis on soil acidity and soil preparation, and summer care the first couple of years. Just as in the case of Camellias, we recommend that you follow the cultural suggestions of local garden club advisers. Azaleas are not difficult to grow.

HOW FAR NORTH WILL AZALEAS AND CAMELLIAS GROW OUTDOORS?

We would not attempt to assign positive northern limits to the areas in which Azaleas and Camellias will grow outdoors, but we can make certain general observations, which may be helpful to persons contemplating the growing of these plants in areas they think might be too cold.

CAMELLIAS: We know of persons growing Camellias outdoors in Dallas, Memphis, Knoxville, Atlanta, and the Eastern Shore of the Chesapeake Bay. It is quite possible that Camellias are or will be grown outdoors further north than these points, but in any case we do not like to give great assurance of success at or beyond these places. The Sasanqua varieties are somewhat harder than the Japonica varieties, and persons in northern areas wishing to experiment with outdoor culture of Camellias might therefore have more success with the Sasanquas. However, if Japonica varieties are desired for growing outdoors in the northern areas, we recommend, in the following order of preference: 1. Early blooming varieties, which open a large portion of their blooms before cold weather arrives 2. Late blooming varieties which have stamens to cushion the bloom buds as they expand and contract during the winter freezes and thaws; 3. Midseason varieties which have stamens. We do not recommend midseason or late blooming varieties which do not have stamens for outdoor growing in the northern areas.

AZALEAS: Azaleas and other Rhododendrons comprise so many different types and species that no general rule can be given. Some varieties, mainly deciduous, are hardy even as far north as Canada. But we can indicate something of the hardiness of the four groups which we are presently offering for sale. The **Hardy Japanese Azaleas** are the hardiest, and can be grown over a large part of the United States, being much at home in Massachusetts, where some are deciduous. The **Kurume Azaleas** are the next hardy, being grown outside as far north as Long Island on the coast, and inland perhaps to the Ohio River. The **Percat Azaleas** are almost as hardy as the Kurume varieties as far as standing cold is concerned, and it has been found that they will grow farther south (southern Florida) and stand more hot weather than the Kurume Azaleas. The **India Azaleas** are less hardy than the above three groups, being able to take about the same amount of cold as the Camellia Japonica.

PROTECTING PLANTS AND BLOOMS FROM COLD

Camellias and Azaleas may be grown in any cold climate if they are put in a greenhouse, sun porch, lighted cellar, room, cold frame or any other place which will give them adequate protection in cold weather. Camellias and Azaleas are widely grown in greenhouses in the northern portion of the United States. Where it is desired to move them outside during the growing season, they may be kept in containers. Plants growing out-of-doors can be given a great deal of protection from cold damage by planting them in a place where the sun will not strike them in the morning after a night of low temperatures. A western or northern exposure is best in order to protect the plants from the morning sun. Additional protection can be afforded outdoor plants by erecting a framework over the plant and covering it with burlap or other material. Still additional protection may be given covered plants by placing a lighted electric bulb under the framework and cover.

WHEN SHOULD AZALEAS AND CAMELLIAS BE SET OUT?

Any plant may, strictly speaking, be "set out" or planted at any time of the year. The only time-restriction on moving plants is that there are certain plants which should not be **dig** during their period of active growth. In digging a plant many of the roots, necessarily are cut, unless the ball is made so large that it includes all parts of the roots, which is not practical except in the case of a very small plant. Therefore, digging a plant will usually cut some of the roots. Should some of the roots be cut during the growing season, when the plant is depending upon its entire root system to keep it going, the plant will be shocked and set back to a greater or lesser degree, depending on the type of plant and the percentage of the root area pruned off. This loss of root area will retard the plant and in some cases even cause its death. Our container plants can of course be moved any day—even during the growing season.

CAMELLIAS are one of the plants for which it is advised not to dig them during their period of growth, which runs in this section from about April 1st to October 1st. However, they may be set out at any time, even while growing, if they were previously dug and burlapped or potted during the dormant period. Our practice is to carry a large selection of plants through the summer in burlap and in containers of various kinds, so that we can offer them for sale at any time of the year.

AZALEAS have particularly dense, compact root systems, and are very easy to move at any time of the year. However, during the hot summer months it is advisable to be a little more careful about watering newly set out plants and, if possible, to afford them some shade. Ordinary burlap tacked to 4 stakes will give them splendid protection from the hot sun.

COME TO SEE US. We cordially invite you to visit our Gardens. Many of the plants in our Gardens have been many years in their development period, and we feel justified in now making a start with modest claims for the beauty our Gardens have now attained. We hope, and believe, that the beauty of the Gardens will measurably increase from year to year. We are going to leave no stone unturned to continually enhance its beauty.

LOCATION: Our Gardens and Nursery are conveniently located at Abbot on the new four-lane U. S. Highway 90, just 5 miles southwest of the Mobile City Limits. We are four miles northeast of Theodore where visitors to Bellingrath Gardens turn southeast from U. S. 90 to reach that world-famous show place. We are also on old U. S. 90.

CAMELLIAS IN CONTAINERS. Nothing can take the place of attractive Camellia bushes in easily and always movable containers. Use them in-doors or out, North or South. These to create that certain attractive atmosphere which is so much a part of our South. These lustrious evergreen bushes of outstanding year round dignity and beauty with their endless glory of magnificent blooms in countless forms and colors will enable you to add a glow to your in-door or out-door drawing room from September to April which can not be obtained in any other way—if you have fine **CAMELLIAS IN CONTAINERS**.

Did you know that we sell Camellia cuttings and scions? Would you like to have a copy of our Camellia cutting and scion price list containing 325 selected varieties? Did you know that we sell Camellia understock for grafting? Write for understock prices.

We are told that our collection of large specimen size Camellia plants is one of the finest. Many friends say that our collection of large specimen Alba Plenas surpasses anything else. We think you will enjoy seeing them.

We have in the Nursery over **two hundred and fifty varieties** of large field-grown Camellias ranging in height from five to fifteen feet, and invite you to visit us and inspect them. Each plant is priced individually according to value, and we have sizes and shapes to fit into any landscape design. **Why wait for small plants to grow to fit your needs?**

Ask for our price lists on such things as Azaleas — Broad-Leaved Evergreens — Coniferous Evergreens—Deciduous Trees and Shrubs—Oriental Magnolias—Miscellaneous Plants and Grasses.

The **nomenclature** book of the Southern California Camellia Society, which is the most complete published, containing approximately 2500 variety descriptions will be sent you by us via parcel post prepaid, upon receipt by us of the regular price of \$1.25. We do this as a service to our customers.

Mobile was the first city to have an Azalea Trail. A visit in early spring when the Trail is at its height will be an experience long remembered. Write the Mobile Junior Chamber of Commerce for the best dates to come.

Join the American Camellia Society. Annual membership, \$5.00. Illustrated yearbook on Camellias sent every year to all members, also colorful quarterly report. Write American Camellia Society, Gainesville, Fla.

"You have made a friend—this shipment came in very pretty, am well pleased . . ."
C. J. W., Rock Hill, S. C.

"The [Camellia] cuttings arrived here the day after you shipped them from Mobile and were in excellent condition . . ."
A. F., Brunswick, Ga.

"The Camellia you shipped to me arrived in very good condition . . ."
Mrs. G. E., Tampa, Fla.

INSTRUCTIONS FOR ORDERING TERMS AND CONDITIONS OF SALE

PRICES: This price list cancels all previous quotations, and the prices quoted herein are subject to change without notice. Prices are F.O.B. our nursery.

MINIMUM ORDER: You may order as small a quantity as you wish. However, the prices quoted herein are based on orders of \$4.00 or more and at least \$1.00 worth of each size of each variety ordered. Should you not desire as much as \$4.00 worth of nursery stock you may make your order as small as you wish by adding 50 cents to your remittance to cover part of the servicing or handling costs.

VARIETY SERVICE CHARGE: You may order less than \$1.00 worth of one size of one variety by adding a 10 cent variety service charge for each instance.

PACKING CHARGES: For packing costs on B&B or container plants to be shipped see statements at the head of the three columns, on first page of prices, which statements outline in detail the packaging costs for shipment of each of the three categories of plants. Where the plants are delivered to you at the nursery these packaging costs are of course eliminated, as the plants do not have to be packaged.

TERMS: Cash with order.

GUARANTEE: All plants are guaranteed to be true to name and in good condition when they leave the nursery.

TRANSPORTATION RISKS: The purchaser assumes all transportation risks. All plants are delivered to the customer when delivered by us to him at the nursery or delivered by us to a public carrier. We therefore prefer that you specify the carrier you prefer. Should you not do so we will select what we consider the most practical carrier for your shipment. Our responsibility ends upon delivery of the plants in good order to the carrier, or to you at the nursery. Remedy for loss or damage must lie between the buyer and the carrier. We recommend that all Container Plants and all B & B Plants be shipped by your car or truck, by Railway Express, or by Motor Freight. B & B and Container Plants can in our opinion seldom go through undamaged when shipped by Parcel Post. Regardless of our experience or recommendations, we will of course carry out the instructions of the purchaser, and ship by the carrier the purchaser directs us to ship by, as the purchaser assumes the transportation risks. The above, and the following two paragraphs are written simply to try to be helpful to the purchaser in making his decision concerning the carrier he prefers.

MOTOR FREIGHT: On orders of large B & B or Container Plants, Motor Freight, though frequently not yet quite as dependable in handling growing plants as Railway

Express, is cheaper, and we suggest that you inquire at the offices of the Motor Freight lines serving your city about connections and delivery time from Mobile. One of our customers received some fine container plants by Motor Freight this past summer which arrived badly burned. Perhaps some Motor Freight truck was not sufficiently well ventilated to prevent the temperatures inside the truck from soaring too high during the hot summer months. That would not have happened in cool weather. The Motor Freight lines are continually improving their service.

PARCEL POST: On orders consisting of Bare Root Bed Grown Plants only, the purchaser may for some reason prefer that they be shipped by Parcel Post. In such cases, please send sufficient postage to cover. We will refund amount not used. If postage is not sent, or if sufficient postage is not sent, and the purchaser specifies parcel post, we will ship parcel post with the amount of postage due C.O.D. (plus the 25 cents or more C.O.D. Post Office charge. The Post Office then adds, in addition, a money order fee). Where purchaser does not specify the manner in which Bare Root Bed Grown Plants are to be shipped, we normally ship them Railway Express Collect, and most of our customers find this most satisfactory. This eliminates any Post Office C.O.D. charge and also eliminates any Post Office money order fee.

SUBSTITUTIONS: We have provided a place on our Order Blank for you to indicate your wishes in regard to substitutions. We will appreciate your being liberal in this regard, as we believe you will understand how impossible it is to keep in stock all the sizes of the more than 300 varieties of Camellias, with which we start each season.

CLAIMS: All claims must be made on receipt of plants. We will be glad to rectify any mistake made by us, but it is agreed that in no instance will our liability be more than the price of the plant.

QUOTATIONS: All quotations are for immediate acceptance and subject to stock being unsold.

CONDITION OF SALE: We accept all orders on the condition that they shall be void should injury which is beyond our control befall the stock.

PLANTS SELECTED by customers before the end of growing season will be re-priced on delivery, based on grade at time of delivery.

SPECIAL SPECIMEN STOCK: Special specimen bushes selected or marked by a customer will of course be charged for according to value, and higher than listed specimen stock prices.

TEAR OUT ALONG PERFORATED LINE
